EXCHANGE RATES

INDICES OF THE REAL EFFECTIVE EXCHANGE RATE BASED ON CONSUMER PRICES VIS-A-VIS THE DEVELOPED COUNTRIES

Sources: ECB and BE.

a. Geometric mean calculated using a double weighting system based on (1995-1997),(1998-2000), (2001-2003), and (2004-2006) manufacturing trade of changes in the spot price of each currency against the currencies of the other developed countries. A fall in the index denotes a depreciation of the currency against those of the other developed countries.

b. Obtained by multiplying the relative prices of each area/country (relation between its price index and the price index of the group) by the nominal effective exchange rate. A decline in the index denotes a depreciation of the real effective exchange rate and, may be interpreted as an improvement in that area/country's competitiveness.

General note to the tables: As a result of the change in the population base (2001 Census), all the series in this table have been revised as from 1996. In addition, since 2005 Q1 the new obligatory variables referred to in Regulation (EC) 2257/2003 (on the adaptation of the list of labour force survey characteristics) have been included, a centralised procedure for telephone interviews has been set in place and the questionnaire has been modified. Thus, in 2005 Q1, there is a break in the series of some variables. For further information, see www.ine.es

a. Series re-calculated drawing on the transition matrix to NACE 2009 published by INE. The underlying series of this indicator are in Tables 24.4 and 24.6 of the BE Boletín Estadístico.

General note to the tables: As a result of the change in the population base (2001 Census), all the series in this table have been revised as from 1996. In addition, since 2005 Q1 the new obligatory variables referred to in Regulation (EC) 2257/2003 (on the adaptation of the list of labour force survey characteristics) have been included, a centralised procedure for telephone interviews has been set in place and the questionnaire has been modified. Thus, in 2005 Q1, there is a break in the series of some variables. For further information, see www.ine.es.

HARMONISED INDEX OF CONSUMER PRICES. TOTAL Annual percentage changes

HARMONISED INDEX OF CONSUMER PRICES. COMPONENTS Annual percentage changes

Source: Eurostat.

a. Since January 2011 the rules of Commission Regulation (EC) No 330/2009 on the treatment of seasonal products have been incorporated. This has prompted a break in the series. The series constructed with the new methodology are only available from January 2010. The year-on-year rates of change presented here for 2010 are those disseminated by Eurostat, which were constructed using the series prepared with the new methodology for 2010 and using the series prepared with the old methodology for 2009. Thus, these rates give a distorted view since they compare price indices prepared using two different methodologies. The year-on-year rates of change in the HICP in 2010, calculated on a uniform basis using solely the previous methodology and which are consequently consistent, are as follows: Jan:1.1; Feb:0.9; Mar:1.5; Apr:1.6; May:1.8; Jun:1.5; Jul:1.9; Aug:1.8; Sep:2.1; Oct:2.3; Nov:2.2; Dec:2.9. More detailed methodological notes can be consulted on the Eurostat Internet site (www.eurostat.eu.int).

INTERNATIONAL INVESTMENT POSITION

COMPONENTS OF THE POSITION

Source: BE.

Note: As from December 2002, portfolio investment data have been calculated using a new information system (see Banco de España Circular 2/2001 and note on changes introduced in the economic indicators). The incorporation of the new data under the heading 'shares and mutual funds' of other resident sectors entails a very significant break in the time series, both in the financial assets and the liabilities, so that the series have been revised back to 1992. This methodological change introduced by the new system also affects the rest of the headings, to some extent, but the effect does not justify a complete revision of the series.

Note: From January 1999 the assets denominated in euro and other currencies vis-à-vis residents of other euro area countries are not considered reserve assets. To December 1998, data in pesetas have been converted to euro using the irrevocable euro conversion rate. Since January 1999, all reserve assets are valued at market prices. As of January 2000 reserve assets data have been compiled in accordance with the IMF's new methodological guidelines published in the document 'International Reserves and Foreign Currency Liquidity'.
